

Possum Populations

Examining changes in possum populations at two different areas of Australia

- Eastern Queensland – diminishing populations
- North Keppel Island, Queensland – increasing but controlled populations

Distribution Trends

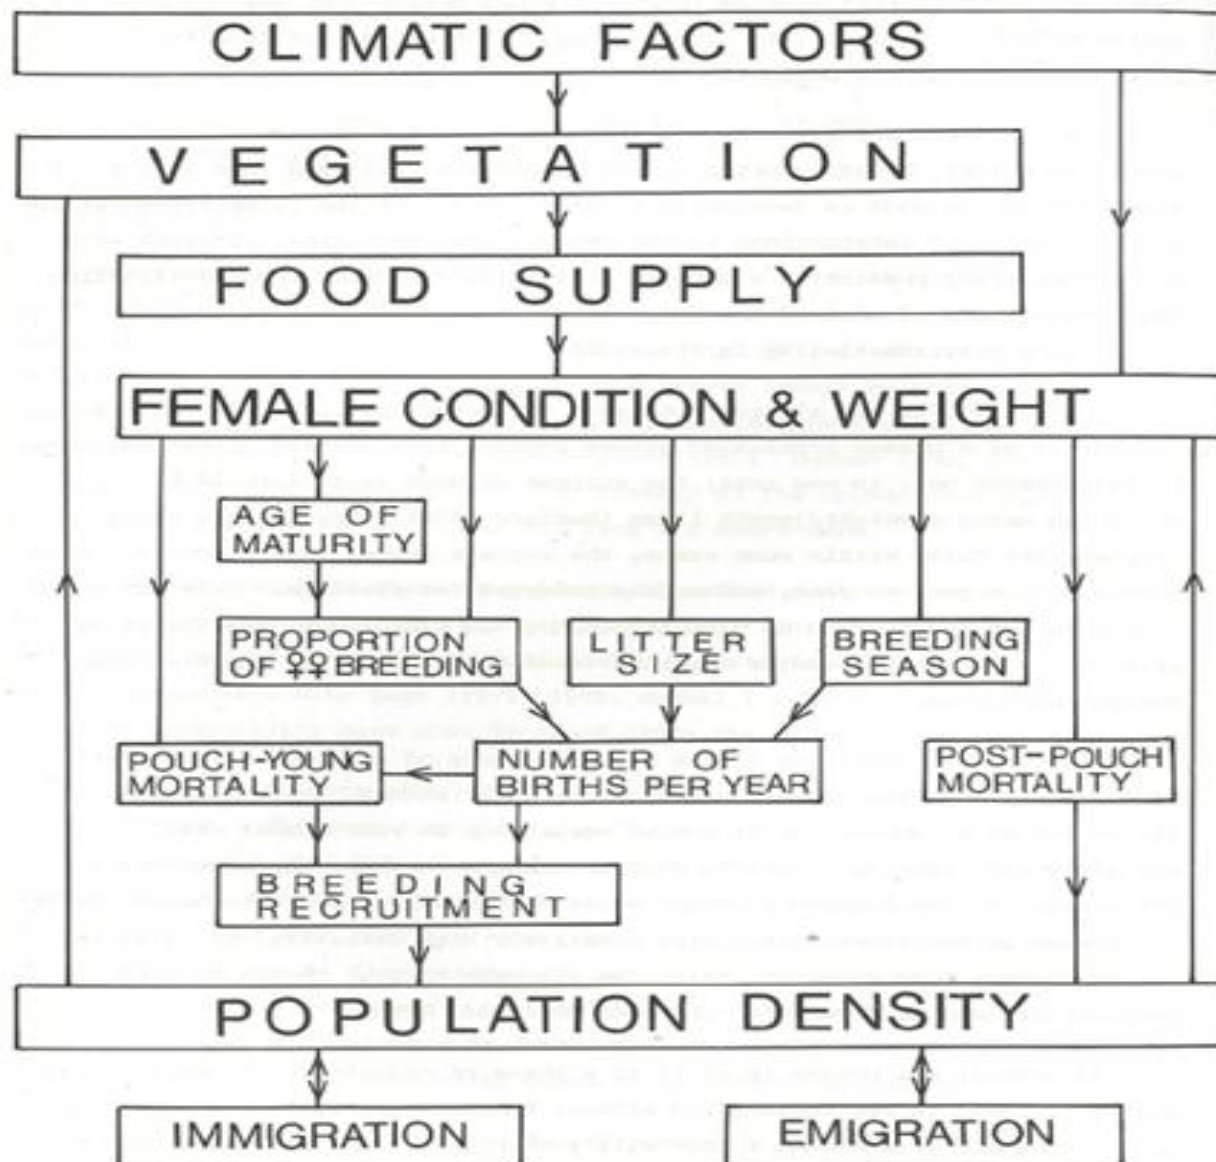

Fig. 13. A hypothetical model of the possum-vegetation-climate complex of interactions in the Orongorongo forest, with emphasis on aspects relating to female breeding productivity. 'Post-pouch mortality' refers to all deaths after the pouch-young phase of development, and to both sexes including females as indicated.

Reasons for Decline?

North Keppel Island

Reasons for Increase

- What could be other advantages to this species?

CAT FOUND!

- MALE - NO COLLAR
- Light tan with grey + black
- Not very friendly. I think he might be scared.
- Not house broken 😞
- Found Jan 23 on Sydney Rd
- if he is yours please call 1700 411 481
